■ THE PURSUIT

What my time at Learn Academy and 6 years served in the Minnesota Army National Guard has taught me is, seldomly do people take the time to reflect on where they come from, who they are, where they are going. We are all constantly growing, and life is hard. It's easy to continually drive on or dwell in the past, learning to occupy the present is a place of minimum turbulence. Recognizing the growth along the way and the successes, is necessary to calibrate yourself on the right path to becoming the best you, you can be.

■ IRON SHARPENS IRON

I am a team-oriented and solutions-based professional. I'm confident in my ability to provide quality products that will meet the needs of the team and exceed the expectations of the clients. With my extensive background in research, and analytics I know I would be an asset to the engineering team.

As a graduate of LEARN academy, I have received over 500 hours of direct coding experience. My knowledge gained at Learn allows me to produce full-stack applications with test-driven development practices using JEST and RSpec. In addition, I have built MVC databases with Ruby on Rails and quality responsive UI with React frameworks. I have also achieved a working knowledge of Functional Programming, Object-Oriented Programming, Relational Databases, and best practices for documenting and producing code.

It would be an honor to work for company that prides themselves with such a high standard for creating wonderful human interactions. Culturally I believe we share many qualities that foster healthy relationships and work environments. As an active listener, fast learner, and holistic thinker, I will strive to make a well laid foundation for vertical and horizontal growth for the company. Thank you for considering my application.
